

Health Policy Ppt Presentation

Select Download Format:

Expressible and increased Twitter data has been used to analyze the impact of the 2011 earthquake in Japan. The data was collected from a large number of users and analyzed using a variety of techniques. The results show that the earthquake had a significant impact on the Twitter network, with a large number of users posting about the event. This information can be used to better understand the impact of natural disasters on social media and to develop more effective disaster response strategies.
